

Status Report for PhiQuest Team for Week #9

What were the goals for this week?

1. Build the transaction log for showing activity performed within the DocBridge.io Google Chrome extension.
2. Marked-up requirements document that outlines the project requirement statuses and describes the accomplished requirements.
3. Schedule and meet with Dr. Christensen for 60 minutes to demonstrate our project's progress.
4. Build the administrator account management dashboard within our administration dashboard site.
5. Update wireframe documents with new specifications for the DocBridge.io metrics dashboard.

What goals were accomplished this week?

1. Build the transaction log for showing activity performed within the DocBridge.io Google Chrome extension.
2. Marked-up requirements document that outlines the project requirement statuses and describes the accomplished requirements.
3. Schedule and meet with Dr. Christensen for 60 minutes to demonstrate our project's progress.

Reflect critically on any goals not accomplished.

We failed to complete goals numbered 4 and 5 which involved the administrator account management dashboard and the wireframe document that specifies the DocBridge.io metrics dashboard. Progress on goal number 4 was unexpectedly halted by server issues with PhiQuest. The staging server's runner went down and made it impossible for us to commit or pull from the main origin branch for the project. Additionally, the staging server became inaccessible and all testing and work needed to be completed locally. Our focus on completing the demonstration and distraction with server issues are the causes of failing to complete goal number 5. These specifications were intended to be completed with help from PhiQuest to capture their expectations, but the project team was distracted with migrating their servers.

What are the goals for next week?

1. Build the administrator account management dashboard within our administration dashboard site.
2. Update wireframe documents with new specifications for the DocBridge.io metrics dashboard.
3. Edit the project specification document with the feedback provided by Dr. Christensen in the project demonstration.
4. Edit the test case document with the feedback provided by Dr. Christensen in the project demonstration.
5. Coordinate with PhiQuest to find a solution for imprinting the DocBridge signature verification into a PDF.

How many hours were spent on each goal noted above?

Ethan Wuitschick - (3) hours on goal 1, (1) hours on goal 3

Allen Chang - (4) hours on goal 1, (1) hours on goal 2, (1) hours on goal 3.

AJ Barea - (1) hour on goal 1, (1) hours on goal 3
